

NUMECENT AND TAI SOFTWARE PARTNER FOR HIPAA COMPLIANT DELIVERY OF HEALTH CARE AND HUMAN SERVICES SOFTWARE USING CLOUDPAGING

Friction-free on-premises or cloud deployment of TAI Cares Platform

June 25, 2013 – Irvine, CA – Numecent™, the cloudpaging innovator, today announced that it entered into a partnership with TAI Software to deploy cloudpaging for HIPAA compliant HealthCare and Human Services solutions.

Numecent's groundbreaking cloudpaging technology enables TAI Software to rapidly Cloudify and optionally SaaSify their Microsoft® Windows®-based applications and deliver them from their TAI CARES platform almost instantly, with zero installation on the client devices. By deploying cloudpaging, TAI Software is able to offer friction-free on-premises or cloud delivery options with a much reduced support footprint and without requiring any changes to their existing applications.

The partnership between the companies expands TAI Software's offerings to state governments, local governments and healthcare/human services organizations by offering cost effective virtualization of electronic record and administrative systems. This approach will allow these organizations to realize the benefits of using sophisticated IT solutions that provide a secure and HIPAA compliant application at a reasonable cost.

Mark Tidgewell, President of TAI Software stated, "TAI Software has confronted many environmental issues and code complexities as we deploy web centric products in the face of the myriad of web browser technologies and versions. We are very pleased to have Numecent as a partner. Their cloudpaging technology allows us to quickly deploy any application designed to work on a local area network without changing a single-line of source code. Cloudpaging works on standard web protocols and frees our customers from managing VPN connections or opening security threats on firewalls."

"We are delighted to be partnering with TAI Software who is a leader in their sector" said Paul Hacker, co-founder and VP of Business Development of Numecent. "Healthcare is an important vertical market for Numecent and with this partnership we are able to

accentuate the HIPAA compliant aspects of cloudpaging for friction-free delivery of healthcare applications”.

TAI CARES is designed to provide a single consolidated platform for data warehousing, program support, and reporting for the Offices of Mental Health including Crisis Intervention, Development Disabilities, Early Intervention, HealthChoices and Children, Youth and Family Services, Substance Abuse and Aging.

TAI CARES is a secure HIPAA compliant Electronic Health Record (EHR) and case management platform, providing comprehensive information and a single workflow for documenting plans, managing contracts, generating invoices, handling generation of HIPAA standard 837 claims and encounters, reconciliation of HIPAA standard 835 and 277 files, and other tasks.

Numecent’s cloudpaging technology allows TAI Software to deliver TAI CARES friction-free from the Cloud or on-premises and with or without subscription. The Cloud option is securely hosted by TAI Software and delivers TAI CARES to organizations that aren’t equipped with in-house servers or local IT. In addition to TAI Cares, cloudpaging will be offered on other TAI Software and third-party health care software in the future.
