

NUMECENT ANNOUNCES ENTERPRISE OFFERING WITH CLOUDPAGING FOR ENTERPRISE

Reducing IT costs for Microsoft® Windows® Application Delivery on both physical devices and VDI

Self-service app store-like catalog streamlines application delivery to end users

March 15, 2016 - Irvine, CA -Numecent®, a cloud software and services company providing application delivery solutions and platforms, today announced that its Cloudpaging® technology has been further expanded with a product focused on enterprise organizations. Cloudpaging for Enterprise gives IT organizations a turn-key self-service app store-like catalog for delivering applications to end users, while saving significant time and reducing costs that would otherwise be spent on manual deployment of applications.

Even with legacy application virtualization technologies, organizations spend a significant amount of time manually deploying software that is incompatible with such products. Cloudpaging for Enterprise supports 99.9% of applications, the highest success rate of any application delivery technology. With Cloudpaging for Enterprise, the costs normally associated with onboarding new users, deploying new applications, delivering application updates and other add, move, or change events can be greatly reduced. Technologies like virtual desktop infrastructure (VDI) address delivering a corporate desktop image but don't provide a single delivery method for applications to users on both VDI and users on physical devices.

"Helping enterprise customers extract IT cost savings while streamlining how applications are delivered is a key benefit to deploying Cloudpaging for Enterprise," said Tom Lagatta, President and CEO of Numecent. "Our enterprise offering augments whitelabeling of Cloudpaging to ISV's and Cloud Service Providers and ensures end customers can deploy across Physical, VDI and BYOD users today."

Numecent will be working with distribution partners globally to provide availability of Cloudpaging for Enterprise to system integrators (SI's), value added resellers (VAR's), and

managed service providers. Focused verticals for Cloudpaging for Enterprise include Engineering, Banking and Finance, Healthcare, and Higher Education.

Numecent's Cloudpaging technology delivers millions of application sessions annually and has delivered more than 10,000 cloudified applications, including CAD,CAM, PLM, DCC and specialized applications, to many enterprises around the world, bringing savings to IT departments while simplifying on-boarding for new end users and reducing the IT impact for delivering new applications and updates.

About Numecent

Numecent is a fast-growing software and cloud-services company pioneering application delivery. Numecent's Cloudpaging technology brings rapid, secure and friction free provisioning of native applications from the cloud through virtualization and containerization.

Delivering solutions to Enterprise customers via channel partners while also servicing cloud providers and ISV's, Numecent, has delivered cloudified applications worldwide, reducing the pain points for application delivery while helping lower costs. Numecent was founded in 2008, and is headquartered in Irvine, California. More information can be found at www.numecent.com
