

NUMECENT TO EXHIBIT CLOUDPAGING TECHNOLOGY AT BRIFORUM LONDON

Conference Sessions Hosted by Independent Panelists to Discuss Numecent's Cloudpaging Offerings

May 16, 2016 - Irvine, CA - Numecent®, a pioneer of cloud-based application delivery, today announced the company will be attending the leading independent End User Computing conference in the UK, BriForum London, running from May 19-20, 2016. Numecent will be exhibiting its innovative Cloudpaging for Enterprise offering at BriForum and will have staff on hand to answer questions. Numecent's Cloudpaging offering will be featured at the BriForum session titled "Best Kept Secret in Application Delivery" and will be presented by Daniel Bolton, End-User Computing Solutions Manager at Kingston University, and Jim Moyle, Lead Solutions Architect of Atlantis Computing.

Bolton and Moyle will use their session to demonstrate how Numecent's Cloudpaging offering takes traditional Application Virtualization to the next level, removing many delivery barriers and focusing on making application delivery faster and more efficient.

Bolton and Moyle will also highlight the benefits of Cloudpaging, using its deployment at Kingston University as an example. After deploying Cloudpaging in conjunction with Numecent education partner Software2, Kingston University achieved a high rate of application delivery success – much higher than other solutions delivered. Kingston's IT team reduced desktop delivery times from several hours to just under one hour. Improving the ability to distribute applications also enabled Kingston to reduce computer lab resources since students could now access applications from anywhere. Reducing computer lab size resulted in further cost reductions for Kingston.

"Numecent is thrilled to attend BriForum, and we are excited to be on hand to talk about our Cloudpaging solutions," says Tom Lagatta, President and CEO, Numecent. "We are proud that Numecent is part of an independent session that will help conference attendees understand the benefits of Cloudpaging."

Numecent's Cloudpaging for Enterprise offering includes the Cloudpaging Studio, Cloudpaging Server and Enterprise Portal. This offering provides a full solution to create Windows Application Containers, deliver them to user devices or VDI sessions and execute them natively.
