

NUMECENT ANNOUNCES THE RELEASE OF CLOUDPAGING FOR ENTERPRISE 9.0

April 25, 2017 - Irvine, CA - Numecent, the only company focused on native Cloud Application Delivery, is pleased to announce the release of Cloudpaging® for Enterprise 9.0.

Cloudpaging for Enterprise transforms native software delivery, deployment, and provisioning to and from the cloud, datacenter, and desktop. Key updates available in Cloudpaging for Enterprise 9.0 include:

- **Windows® 10 and Windows Server® 2016 Support**
Cloudpaging Player has been updated to fully support Windows 10 anniversary edition and Windows Server 2016 with Remote Desktop Services (RDS). Migrating to a new platform has never been easier.
- **Improved Performance and Best Application Compatibility**
Enhancements to the Cloudpaging Player have improved application virtualization and launch times. Furthermore, Cloudpaging 9.0 is now fully compatibility with Virus Scanners, Malware Detection, and other System level applications.
- **Tools for Packaging Automation and Reusability**
Several new features were added to Cloudpaging® Studio, including the addition of “Non-Interactive Packager” that can generate Cloudpaging Applications from MSI’s with no manual intervention. Studio Projects are now in a reusable format and are automatically stored within the virtualized application package, simplifying long term management of Studio Projects and enabling users to share projects.
- **Enhanced Licensing Options**
A “Metered” licensing feature has been added to the Cloudpaging Server. This licensing option records application usage information without restricting the application to the number of seats, concurrent usage, or online/offline status.

Compared to legacy application virtualization technologies, Cloudpaging has the highest success rate of any application delivery technology at a lower cost. Phil Morgan, Director of Client Services at Software 2, one of Numecent partners, states "Cloudpaging 9 delivers apps to end-users faster than ever before, with some of our University customers reporting a 30% improvement. When we demo to new customers, first launch times for some apps are so fast IT admins think we are cheating!"

"Simplifying how applications are delivered while freeing up valuable IT Resources is a key benefit of deploying Cloudpaging for Enterprise. Cloudpaging for Enterprise 9.0 provides the most mature and best application virtualization solution available in the market today." said Doug Pfiffner, CTO of Numecent.

Numecent's Cloudpaging technology delivers 10+million application sessions annually and has packaged 10,000+ applications, including CAD, CAM, PLM, DCC and specialized applications to enterprises around the world, bringing savings to IT departments while simplifying on-boarding for new end users and reducing the IT impact for delivering new applications and updates.

About Numecent

Numecent is a fast-growing software and cloud-services company pioneering application delivery. Numecent's Cloudpaging technology brings rapid, secure and friction free provisioning of native applications from the cloud through virtualization and containerization.

Delivering solutions to Enterprise customers via channel partners while also servicing cloud providers and ISV's, Numecent, has delivered cloudified applications worldwide, reducing the pain points for application delivery while helping lower costs. Numecent was founded in 2008, and is headquartered in Irvine, California. More information can be found at www.numecent.com
